satyapraneet63
satya-praneet-challapilla

Electronics Engineer | Maker | DevOps

Electronics engineer with hands-on experience across embedded systems, DevOps, and self-directed hardware projects (3D printing, home server infrastructure, PC/electronics builds). Currently pursuing an MSc in Creative Robotics at University of the Arts London, starting September 2026. Seeking part-time or remote technical work — DevOps, infrastructure, or maker/hardware-adjacent — to run alongside coursework.

SKILLS

Programming and Scripting	Bash, Git, LaTeX , YAML, C, Python
DevOps and Monitoring	CircleCI, Docker, DataDog
Cloud and Infrastructure	AWS, Terraform, Kubernetes
Electronics & Hardware	Soldering, Arduino, Embedded Systems (PIC18F4550); prior exposure to EagleCAD, LTspice
Design & CAD	FreeCAD, Blender (learning)
Linux & Systems	Daily Linux user since 2017 — system setup, configuration, and troubleshooting

TECHNICAL EXPERIENCE

IT-DevOps Engineer Jul 2022 — Jul 2024
Tray Remote

- Configured AWS accounts and managed EC2 nodes, ECS clusters, and RDS setup, restoration, and performance tuning to support load testing and analytics workloads.
- Built internal log pipeline from CloudWatch to OpenSearch and DataDog, enabling structured querying, visualization, and real-time alerting.
- Devised deployment scripts integrated with Slack, **improving deployment times by 75%**.
- Configured **CI/CD pipelines** through CircleCI for seamless integration and deployment of containerized services and internal tooling.
- Created Infrastructure as Code templates using **Terraform** to scale and onboard new clients efficiently.
- Developed monitoring workflows and automated scheduled deployments for containerized services using Terraform and Docker.
- Supported **PCI compliance documentation** and handled security-related tasks for a secure infrastructure.
- Ported organization codebase to a MonoRepo, standardizing tooling and minimizing disruption across teams.
- Designed and built a **parallel automated deployment system on ECS**, replacing a fully manual process, in collaboration with a US-based engineering manager — covering provisioning, scaling, and release automation.
- Automated onboarding tasks for interns and new hires using scripting (Bash and lightweight Python).

Cloud Engineer Jul 2021 — Nov 2021
Searce Cosourcing Inc. Remote

- Part of the Pre-sales technical team, creating SOWs for infrastructure migration to Cloud/Hybrid environments.
- Conducted analysis and cost estimation of existing infrastructure for migration to Google Cloud.
- Targeted potential Indonesian customers for server migration projects as part of the SEA Indonesia team.

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Electronics and Instrumentation Engineering, *Birla Institute of Technology and Science, Pilani* Aug 2021

- AWS Cloud Practitioner Certification** Jan 2024
- GCP Associate Cloud Engineer Certification** May 2022
- IELTS** 8.0/9.0, Mar 2026

PROJECTS & ACTIVITIES

Independent Projects & Postgraduate Preparation Jul 2024 — Sep 2026
Self-directed

- Prepared for and sat postgraduate admissions exams (NID, NIFT, CEED), leading to an offer for MSc Creative Robotics at University of the Arts London, starting September 2026.
- Deepened Linux systems and self-hosting practice: expanded home server (media management, PDF tooling, audiobook serving), configured a personal domain with Cloudflare Tunnels for secure remote access, and converted repurposed laptops into headless handheld gaming systems (CachyOS).
- Continued 3D printer development: hardware upgrades and remote/non-local Klipper control via Cloudflare, with custom automation scripts for profile management and bed probing.
- Built a custom gaming PC from individually selected components.
- Currently developing working proficiency in Neovim, Python, and ROS2 in preparation for postgraduate coursework.

Deployment Automation

2022

Tray

Remote

- Developed a semi-automated deployment process using bash scripts to pick compiled builds from S3, transfer them to target nodes, and deploy to Apache Tomcat.
- Implemented version control with tags on builds for proper accountability in deployments.
- Created a CI/CD pipeline using GitHub Runner for a JavaScript-based application on Kubernetes, with versioning and deployment strategies outlined for both development and production environments.

Personal HomeServer

2023

Self-initiated

- Built a container cluster using Portainer, running on a Raspberry Pi, with various containerized applications for personal use.
- Managed applications for monitoring (cameras), document/media storage, and on-demand Audiobook serving.
- Integrated Mobileraker with my 3D printer for remote control, as well as a connected webcam for livestreaming and timelapse creation.

Design Collaborator, DnD-Themed Café

2025 — Ongoing

Independent Investor & Collaborator

- Investing in and advising on the design direction of a tabletop-RPG-themed café, in collaboration with the founder.
- Produced physical miniatures and design mockups to develop the space's visual identity and theming.

3D Printing System with Klipper Firmware

2024

Self-initiated

- Customized the Ender3V2 3D printer by installing Klipper firmware to enhance performance and precision.
- Integrated additional hardware, including custom sensors for filament tracking, movement accuracy and automated levelling.
- Wrote custom Klipper code to support the new hardware, fine-tuning the printer's capabilities for improved print quality.
- Designed and printed two stereo 3-way speaker cabinets using PLA, powered by a KABD-4100 DAC+Amp, while customizing audio profiles for enhanced sound performance.
